Metallic Hard Sealing Butterfly Valve

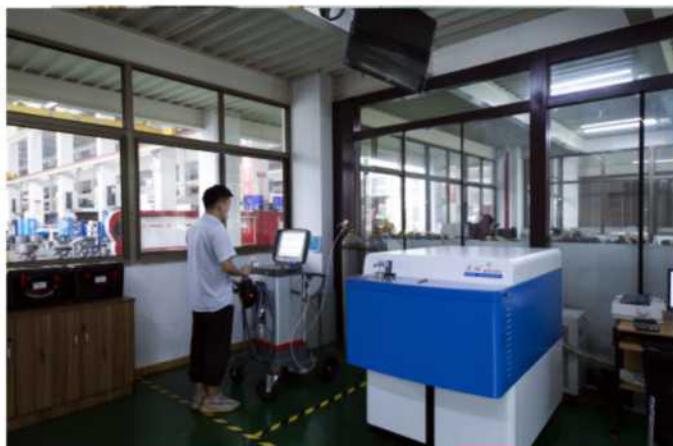

ZHEJIANG BOTELI TECHNOLOGY CO.,LTD.

Quality Determines Survival

On the basis of strictly implementing ISO9001 Quality Management System, BTL also passed CE European Union Safety Certification in 2002. It passed American Petroleum Institute API-6D certification in 2003. It passed ISO14001 Environmental System Certification and ISO45001 Occupational Health and Safety Certification as well as National Pressure Vessel Safety Registration (TS) Certification in 2003, all of which pro-

vide Passport for the company to enter international market. BTL not only makes full use of domestic scientific research resources, but also employs first class technical talents from abroad. Through continuous improvement and development, it has formed complete quality control system, which provides reliable quality guarantee for "BTL manufacturing". From spare parts inspection, on-site inspection to

complete machine inspection, BTL implements quality control in every chain in inspection instruments, strictly controls The production. The BTL quality control center, equipped with first class inspection instruments, strictly controls every product to consistently carry out the "Fine Product" strategy.

Metal Seal Butterfly Valve

BTL DM00 series double-way metal hard-seal butterfly valve adapts three-eccentric structure, and a reasonable choice of two eccentric parameters of the valve stem and the cone angle of sealing cone, completely avoid the two eccentric structure of the valve disc rotation angle from 0° to 20° seal within the interference between the vice and mutual friction damage. The valve seal pair formed by tapered annular wedge surface contacting, with a large of the contact area and a good agreement compared with the seal pair formed by the linear contacting, greatly reducing the local stress of the secondary seal contacting parts and can avoid the linear sealing that easily damaged affect the valve sealing performance.

Valve seats are all-metal materials, and seals are metal steel sheet (there is graphite layer between the multi-level ring); therefore, the metal sealing butterfly valve is more durable than the soft sealing butterfly valve, especially in high-temperature, low temperature and resistance to fire environment, which still can maintain a good sealing effect and operability. It can adapt to a variety of demanding conditions if choose reasonable cladding material that matches the seat sealing surface and steel material of the sealing ring.

Compared with gate valve, ball valve, metal sealing butterfly valve has a broader applicability and excellent cost performance; therefore, which has been received a rapid development. They have been widely used in the area of petroleum, chemical, metallurgy, power generation, plumbing and other various types of pipes.

Product Features

- Metal sealing - zero leakage
- Resilient metal seals
- Sealing surface friction rotation
- Torque seal
- The nature of fire safety
- Bi-directional pressure
- Stem anti prolapsed
- Parts are Interchangeable

Typical Applications

- Oil and gas
- Offshore drilling platform
- Chemical industry
- Power industry
- Construction industry
- Metallurgical Industry
- Plumbing Engineering
- LNG storage and transport

Metal Seal Butterfly Valve

■ Disc and shaft

Rigid sturdy design, Integrated stem taper pin reliably connected with the disc, the stem is completely covered in the valve plate, protecting stem from media erosion. The good disc fluid dynamics section design, not only improves the flow capacity of the valve, but also reduces the pressure drop.

■ Body

Integrated cast structure, has good rigidity and no leakage characteristics. Valve seat and body are-in-one design, seat adopts oblique cone structure, forming a complete seal surface, greatly enhance the reliability of the seal.

■ Disc position indicator

Reliable disc location signage

■ Stem

The external strength of stem is lower than that of internal strength, which ensures stem internal connection safe and reliable

■ Disc pin

Close bonding of the plane area, reduce the local contact stresses between the pin and the stem, and to improve the reliability of the connection of the disc and stem.

■ Hard facing seat

Integrated hard facing valve seat, can bead weld different materials, to meet the requirements of a variety of conditions, and to ensure the long-term sealing performance under harsh conditions.

■ Bottom seal

Multiple-seal, ensure that the valve itself connection part no leakage.

■ Yoke

The overall rectangular bracket, better rigidity, more assembly space

■ Stem anti-fly

Prevent valve stem from spray wounding under internal pressure

■ Stopper pin

Make sure rigid connection between yoke and valve body, reliable for transferring torque

■ Anti-dust ring

To prevent granular media into the valve sleeve affecting operation

■ Self-lubricating bushings

Reduce the rotational torque, supporting stem and its effective separation with the valve body, reducing the wear of the valve stem.

■ Axial positioning

Axial reliable positioning, avoid the valves' trim playing along with the axial in the process of valve turn on and off.

Metal Seal Butterfly Valve

Main Material

Body: ASTM A216 WCB
A351 CF8、CF8M、CF3、CF3M
Stem: ASTMA182 F6a, XM19
A564 630(17-4PH)
Disc: ASTM A216 WCB
A351 CF8、CF8M、CF3、CF3M
Yoke: ASTM A576 1025
Bottom cover: ASTM A105
A240 304、304L、316、316L,
Seal ring: ASTMA240 304+FG、316+FG
A564 630(17-4PH)
Radial bearing: ASTM A276 304、316
Disc pin: ASTMA182 F6a, XM19
A564 630(17-4PH)
Screw/Stud: ASTMA193 B7、B7M、B8、B8M
Nut: ASTMA194 2H、2HM、8、8M

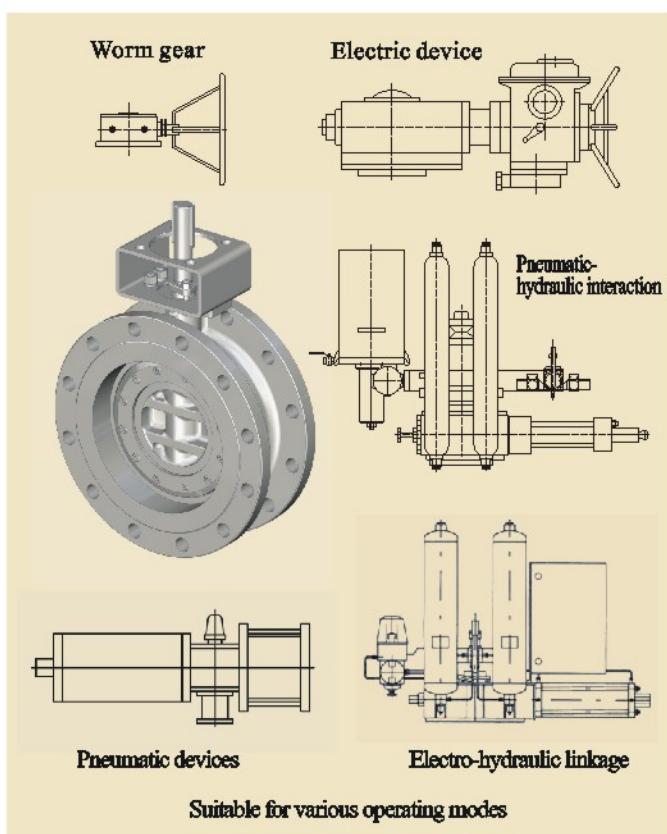

Scope of supply

Size: NPS3~NPS60 DN80~DN3000
Class: CL150~CL1500 PN6~PN160
Temperature: -196°C~600°C

Valve Operation

Pneumatic devices

Electro-hydraulic linkage

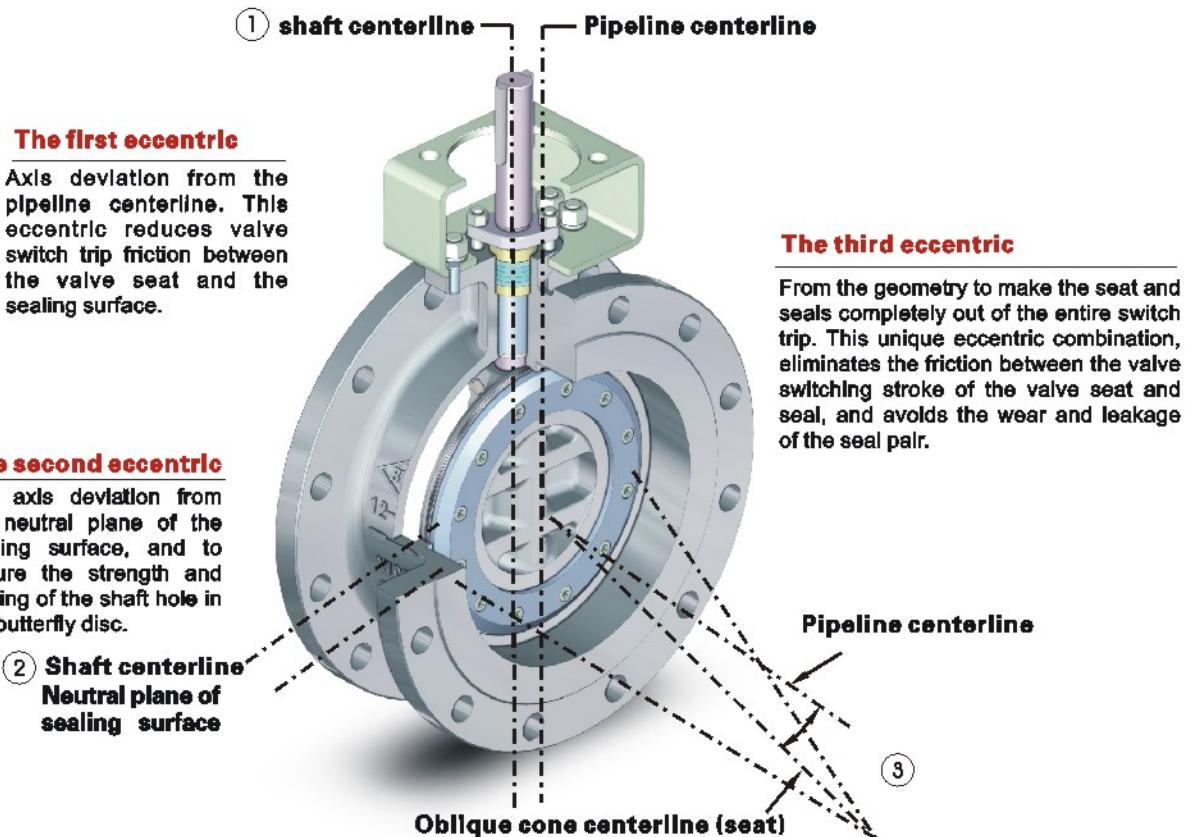

Suitable for various operating modes

Metal Seal Butterfly Valve

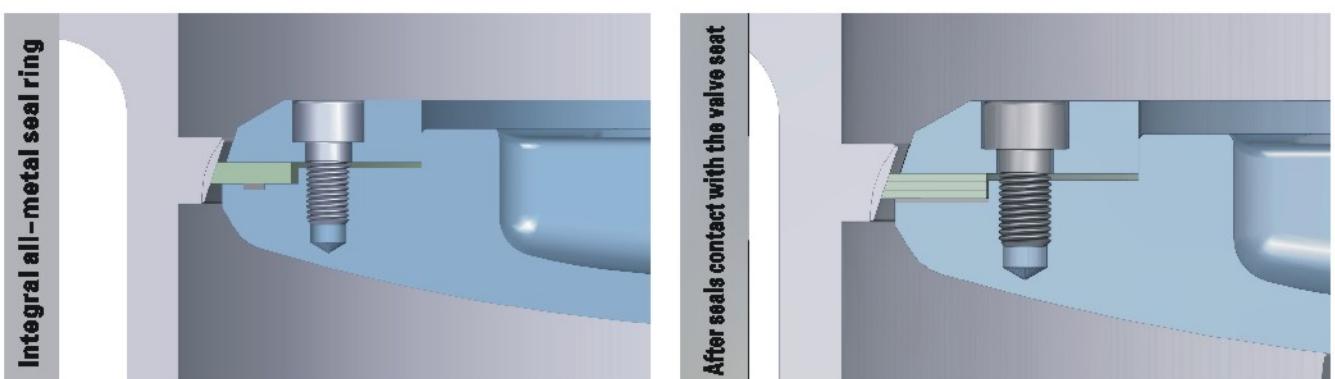

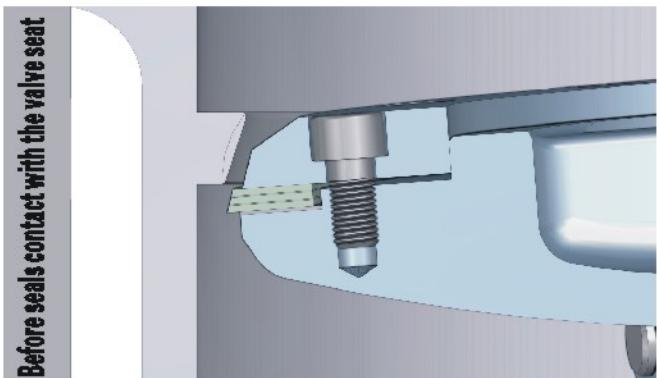

■ Three eccentric structural features

■ Elastic metal seals

The BTL DM00 series butterfly usually relies on the stainless steel - graphite composite seals assembled in the butterfly disc to achieve zero leakage. In the process off turning off valve sealing, the sealing ring external taper by the extrusion of the inner cone in the seat, producing mainly circumferentially distributed radial elastic deformation, forming an elastic force, resulting in specific pressure in the sealing surface, and completely cut off the medium. (As right picture shown) Due to the outer conical surface of the steel layers and the seat tapered inner surface can form a good sealing effect, even if the single steel sealing surface of the seal ring failed sealing, which does not affect the overall sealing performance. Under special working conditions, it also will adopt monolithic all-metal seals to meet the needs of the special working conditions. (As the following picture shown)

Metal Seal Butterfly Valve

Process measures

Boteli Company has not only high-class CNC machining and testing equipment, but also fully dedicated technology and equipment to ensure the accuracy of the important parts in the key processes processing, and to ensure that the same parts are interchangeable.

Stem, pin: key parts take heat treatment in strict accordance with the procedures, to ensure that the important mechanical properties.

Stem: grinding, to ensure the accuracy.

Valve body and disc shaft hole: machined by machining centers, to ensure that the size, location accuracy.

Body seat: sealing surface bead welding hard materials

Sealing surface: adopt special tooling to accurate positioning, rough machining finish machining, coarse grinding - grinding, polishing, to ensure the precision of seals and interchangeability of parts.

Composite metal sealing ring: special process laminated molding.

Sleeve: surface hardening treatment.

Cryogenic valves: The main parts will carry out liquid nitrogen cryogenic treatment.

Non-machined surface: shot blasting treatment to improve the adhesion of the protective layer, with a beautiful appearance.

Quality Assurance

Boteli metal sealing butterfly valve has a comprehensive quality control measures and a sound quality assurance system from design to procurement, processing, assembly, test, and subsequent surface treatment, packaging, shipping, to ensure that each valve out of factory can meet the quality requirements.

Material Inspection: chemical composition and mechanical properties for main pieces.

Sealing surface bead welding: operate in strict accordance with the welding procedures.

Sealing surface: take non-destructive testing after finish machining.

Torque measurement: verify the rationality of the design to provide a reliable basis for a reasonable choice of the drive unit

Destruction moment tests: verify that whether the maximum carrying capacity and destruction point of the drive chain is same as the design results before damaged.

Pressure testing: to ensure that each valve shell zero leakage and forward voltage zero leakage seal, reverse pressure seals meet the corresponding requirements.

Cryogenic pressure test: take seal test under liquid nitrogen cryogenic temperature.

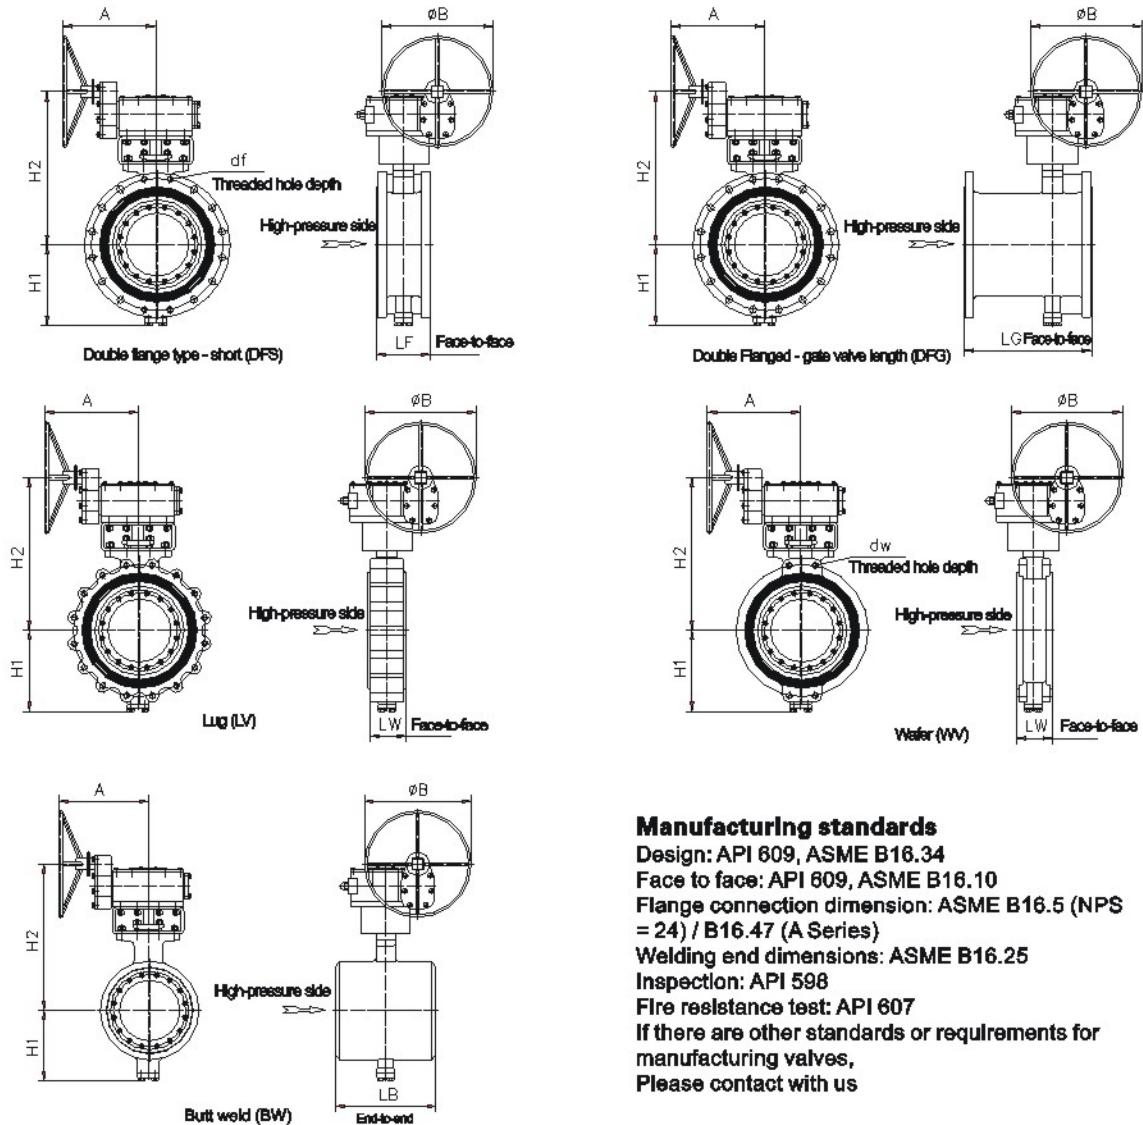

Switch action test: valve fully closed - fully open, fully open - fully closed trial run.

Metal Seal Butterfly Valve

Class 150/300/600/900/1500Dimensions

Manufacturing standards

Design: API 609, ASME B16.34

Face to face: API 609, ASME B16.10

Flange connection dimension: ASME B16.5 (NPS = 24) / B16.47 (A Series)

Welding end dimensions: ASME B16.25

Inspection: API 598

Fire resistance test: API 607

Metal Seal Butterfly Valve

Dedicated butterfly valve can be designed according to the special requirements of the user, such as cryogenic butterfly valves, high temperature butterfly valve, stem extend (buried) butterfly valves, slow open slow closing check butterfly valve that be liquid controlled by quick closing butterfly valve pumping station, turbine inlet butterfly valve etc

■ Cryogenic butterfly valve

Operating temperature -196 °C ~ +315 °C
Metal seal, seal performance will not be Impacted by low-temperature
Low temperature valve operation is basically the same as normal temperature
Available online inspection, maintenance, replacement of seals
All cryogenic valves are taken low temperature test in the company
Apply to Inconvenience replaceable maintenance cryogenic conditions, such as LNG, LPG, etc.

Metal Seal Butterfly Valve

BTL

**Metallic Hard Sealing
Butterfly Valve**

**Worm gear telescopic
butterfly valve**

**Worm gear Heightening
butterfly valve**

**Worm gear welding
butterfly valve**

**Electric wafer type
butterfly valve**

**Pneumatic flange
type butterfly valve**

**Electric welding
butterfly valve**

Hydraulic Control butterfly valve

Quick closing butterfly valve

Note: In order to continuous improvement of products, our company has the right to continue to improve in terms of design, materials, dimensions and specifications.
We will not make a notice if there is any modification.
